

# Environmental change and behavioural flexibility: Japanese monkeys and disability on Awaji Island, Japan

**Prof Sarah Turner, Concordia University**

**Australian  
National  
University**

What does it mean for an animal to have a physical disability? Physical disabilities can drive wild and free-ranging animals to adjust their behaviours in order to solve daily challenges associated with survival, social living and reproduction. In this seminar, Prof Turner will tell the story of the Awajishima monkeys and illustrate it by presenting data on detailed examples of Japanese macaque behavioural flexibility – grooming and feeding styles.
